

Durango Pergola Assembly Instructions

ITEM NO.	DESCRIPTION	QTY.
1	6x6 Redwood Timber Post	4
2	3x12 Redwood Timber Header- Bottom	4
3	3x12 Redwood Timber Header- Top	4
4	3x6 Redwood Timber Lath	10
5	3/4" Malleable Washer	32
6	3/4" x 12" Bolt	16
7	3/4" Hex Nut	16

List of Tools required:

2 People

Drill

7/8" x 8" Drill Bit

15/16" Driver bit or wrench(s)

Nails or Woodscrews (Galvanized)

Hammer

Framing Square

Bubble Level

Measuring Tape

Pencil

(8) 4ft+ Long Scrap 2x4 for use as temporary bracing.

1) Layout Post Anchors

On Level ground mark location of the 4x included post anchors. Ensure that diagonal measurements are equal to maintain square dimensions.

2) Secure Post Anchors

Install Post anchors in marked location. Consult Simpson installation instructions for proper procedure.

3) Assemble Posts and 3x12 Bottom Headers

Bottom Headers differ from Top Headers by the narrower flange along the bottom. Ensure that the headers are identified correctly. With two 6x6 Post [1] laid flat on the ground measure $11\frac{1}{4}$ " from the top edge and mark for the top of the 3x12 Header. Center the pre-drilled holes of 3x12 Header [2] upon post. Ensure equal $92\frac{1}{2}$ " spacing along the length of the posts and use a framing square and bubble level to maintain square dimensions. Mark hole location and drill holes through posts using $\frac{7}{8}$ " drill bit.

Assemble two 3x12 Bottom Headers on both sides of post using provided hardware

Repeat for remaining two posts and 3x12 Headers

4) Hoist Assembled Posts and Headers into Anchors

Prepare four scrap 2x4 to temporarily brace the posts after being hoisted into place. Hoist one post and header structure upright and place bottom end of posts into anchors. Use a level to ensure that posts are plumb and secure into anchors with choice of hardware. Consult Simpson installation instructions for proper procedure. Brace the posts laterally using 2x4 to keep them from falling over during assembly. Secure the 2x4 braces to both the post and the ground.

Repeat for opposite side.

5) Assemble 3x8 Headers

Place 3x12 Top Header [3] across top of 3x12 Bottom Headers [2]. Center pre-drilled holes upon post and mark location. Drill holes through posts using 7/8" drill bit.

Assemble two 3x12 Top Headers on both sides of post using provided hardware

Repeat for remaining two 3x12 Top Headers on opposite side

6) Assemble 3x6 Lath

Measure $9\frac{3}{4}$ " from end of 3x12 Top Header and locate outside edge of 3x6 Lath [4]. Hang over the edge 11" on each side to center the header. Place remaining nine 3x6 Lath pieces along length with $5\frac{1}{8}$ " spacing between each. Secure 3x6 Lath to 3x12 Top Headers with woodscrews or nails. Pre-drilling pilot holes is recommended to prevent splitting.
